Conservation Farming Field Preparation

- ❖ After the harvest, do not burn the crop residues. Instead, leave them on the ground. The more residues remaining on the ground the better because they enrich the soil, making it more fertile. A layer of crop residue around the bottom of trees and seedlings will help increase the amount of moisture in the soil which prevents trees from getting too dry. Remember that crop remainders can also be used for compost manure.
- ❖ Try to stop animals from grazing on the area. If they graze there will be less crop remainders left covering the ground.
- ❖ Conservation farming holes have to be dug before the rains come. It is therefore vital to start digging them early.
- ❖ Mark out where you are going to dig your holes. Get a long piece of rope or string and squeeze bottle tops on to it 70cm apart. Stretch the rope across the width of your field. Each bottle top marks the centre of a hole and it makes sure that the holes are correctly spaced out. Mark out the rows of holes using a hoe. Each row should be 90cm apart. Just mark out the rows and holes you think can be completed that day.
- ❖ On the same day as you mark a block of holes, dig the holes. The holes need to be oblong. They should be between 15cm wide, 35cm long and 15cm deep.

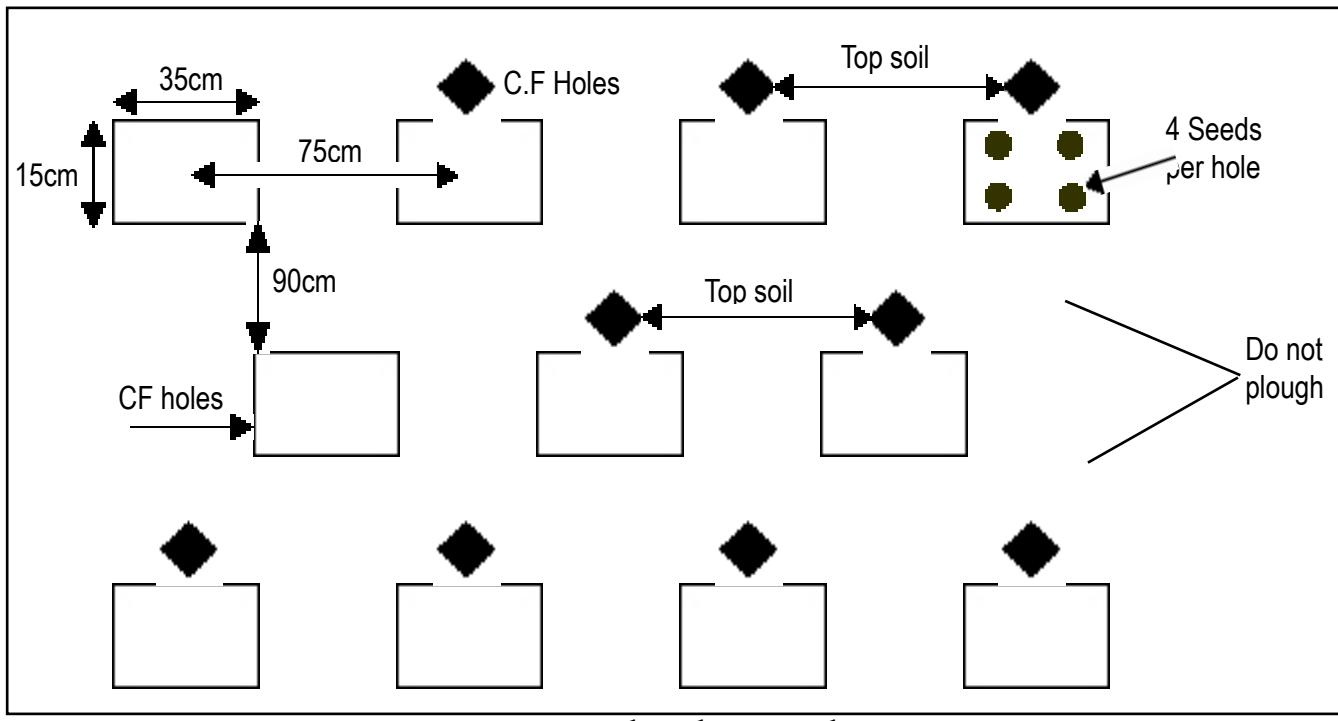

A Small Group member from Tharaka TSE preparing conservation farming holes.

- ❖ When you are ready to plant the grain it is important to put some very fertile soil into the holes to help the crop to be stronger. Take some manure and good topsoil and mix it together, or use compost manure. Fill the hole with the mixture up to 5cm from the surface. That space will help capture more rain.
- ❖ If you are planting maize, soak the seeds in some water for 6-7 hours before planting them. This speeds up germination and means that more will survive. When you plant the seeds, plant 4 seeds in the soil across the hole. Cover them with 2.5cm of the rich soil and manure mixture. After this the soil in the hole should be about 2.5cm below the surface of the field. It should never be more than this. Clods (big lumps of soil) should always be broken up so that the soil makes good contact with the seed.
- ❖ If you are planting sorghum, plant 5-6 seeds at each end of the planting hole after a good shower of rain. Cover the seeds with 2.5 cm of the rich soil and manure mixture.
- ❖ The space at the top of the hole enables water to get to the plants when the rains come. Without this space the rain will just run off the land, taking a lot of the soil nutrients with it.
- ❖ Weed around the holes regularly. Each year there will be few and fewer weeds.

You do not need chemical fertilizer on the kilimo hai/ conservation farming plot!

Do not plough your plot

Start planting indigenous trees along the farm boundaries, and especially along the streams and rivers. Do NOT plant Eucalyptus trees anywhere near a stream or

Nursery care and protection

A. Pest control

Organisms like fungi, bacteria, viruses, nematodes and insects (e.g. ants, termites, aphids) can damage seedlings.

A common nursery disease is called *damping off* and is caused by fungi. It causes seeds to rot before germination, roots to decay before the shoot appears and the shoot to become thin and collapse. The typical symptoms are

- The thinning and death of the stem at ground level.
- The subsequent wilting and falling over of the seedling.
- The leaves turn yellow.
- The seedling eventually dies.

Control damping off by:

- Changing seedbed soil every 1-2 years. Loosening the soil also helps.
- Immediately removing affected seedlings and burning them.
- Avoiding excessive watering.
- Ensuring good drainage.
- Providing better aeration.
- Weeding effectively and on time.
- The soil should not be overly fertile. The proper ratios of the soil should be followed. Reduce nitrogen content by applying less manure.
- There should be enough spacing between seedlings to avoid overcrowding.
- Make sure that the nursery is clean at all times.

A Small Group member from Kirinyaga TSE tendering their group nursery.

Diseases can also be managed by the proper use of chemicals and insecticides. It is best to use natural insecticides as chemical ones can be expensive and may damage the environment. For instance.

- Application of ash.
- Ensure the seedbed is clean to avoid encouraging pests.

B. Root pruning

Move the seedlings around once a week so that the taproots do not sink into the ground and need to be cut. A healthy taproot helps the trees get water after transplanting.

When the seedlings are growing in the pots after 3-4 months (depending on species and climate) their roots start to grow out of the bottom of the pots. These roots should be cut every 1-2 months with knives. Note that care must be taken when lifting the pots so as not to damage the young roots.

Alternatively, try the raised nursery beds which reduce the need for root pruning as the roots drop off naturally.

C. Watering, weeding and shading

- Sprinklers should be attached to the watering cans so as not to cause soil erosion.
- Avoid too much or too little watering.
- Water every morning and evening when possible.
- Avoid watering during mid day because more water will evaporate because of the heat.
- Be careful not to damage roots when weeding.
- Do not leave the weeding too late. Weeding is necessary as the weeds increase competition for light, soil water and nutrients.
- Some seeds require shading – make sure simple shades are constructed.
- During the rainy season, cover the seedlings using dry grasses or hay. Seedlings should be moved away from under trees so water does not drip onto the seedlings and cause damage.
- **Fence off the nursery to protect from cattle and playing children.**
- Let the seedlings grow to about 30 cm before transplanting. This may take from 1 month to 6 months.

Tree Spacing Guide.

Why more than 2m is the best spacing.

TIST has been tracking tree baseline and putting data over the past three years about tree spacing. We have found that the tree and the groves where the farmers plant the trees will grow the best only if the spacing between trees is two meters or more. Some farmers have been using this spacing for many years, and their trees have been growing much better and larger than trees planted at one meter.

We have seen that trees planted at one meter grow slower, are smaller, and most importantly, do not sequester a lot of carbon. The main goal of TIST and our farmers is to plant trees

to capture carbon and improve the land of the farmer. Our goal is not to plant trees very close together that are going to be harvested and cut down soon for utility poles. TIST and the farmers who plant at two meters have seen the good results of that spacing. Trees planted at two meters or more do not have to fight for water and minerals in the ground.

It is important for all TIST farmers to know that **quantifiers will only be counting trees planted at two meters or more**. This spacing still allows farmers to plant up to 1,000 trees on a hectare of land! This also means that the trees planted farther apart will grow stronger and yield more fruit and nuts.

TIST: The Best Practice in Conducting Weekly Meetings.

It is important for your Small Group to be having regular meetings. For instance, once a week or once after two weeks. This will give all members in your Small Group an opportunity to strengthen your group and also share and learn new ideas.

Meeting Schedule.

In managing our time better, a small group should have well-organized meeting schedule. This is important because it will help your small group keep focus of your agendas and other activities. Since we are farmers, time is important to us, and we need to make sure we hold efficient meetings that do not take up most of the day light hours.

During your meeting, it is necessary to focus on important issues. To be able to accomplish this, other TIST small groups have practiced the below steps when conducting their meetings;

Step I. Greetings and introductions for any new members (5 – 15 minutes):

Make sure everyone feels welcomed. Make it brief but let each you introduce himself or herself.

Step II. Opening prayer (2 minutes):

It is important to begin your meeting with a word of prayer. Keep it short.

Step III. Songs (5 minutes):

These could be songs written by your group, or songs that encourage people

such as religious songs. A song sung by all will relax us and put us in a better mood.

Step IV. Agreement on task and time (5 minutes):

The leader explains what will be done in the meeting and the group members agree to do the task. The time spent should be agreed so that the co-leader can help keep the meeting on time.

Step V. Group work on tasks (1 hour):

Ideally the tasks should have been discussed at the end of the last meeting. Tasks might include sharing what each person has done to help TIST activities, sharing best practices, training and any other important issue that will help your small group to prosper.

Step VI. Kujengana (5 minutes):

Each group member makes one positive, specific statement to that week's leader about his or her observable leadership of the meeting. In addition, anyone may identify a gift seen in the leader.

Step VII. Closing prayer (2 minutes):

End your meeting with a word of prayer.

How to control soil erosion.

Soil erosion is the loss of soil due to water or wind transportation.

What causes soil erosion?

a) **Cultivated soil left uncovered:** Digging land loosens the soil and exposes it to erosion. Such soil is vulnerable to erosion unless it is covered by trees or plants.

b) **Cultivation of easily damaged land:** Certain types of land are unsuitable for agriculture, such as land on steep slopes. When people attempt to cultivate it the soil cannot endure the strain and thus erodes.

Planting of trees along the river banks helps prevent soil erosion.

- c) **Overgrazing:** When too many animals are allowed to use a piece of land there is loss of vegetation and subsequent soil erosion.
- d) **Cutting down of trees:** When land is cleared of trees soil can become exposed and be eroded.

Consequences

Food shortage: Soil erosion reduces soil fertility and hence reduces food productivity.

Water impacts: Soil entering water can disrupt habitats, enter the drinking water supply, and carry chemicals used on fields into the water supply.

Hazard risk: Soil erosion can cause flooding. When the soil settles in streams and rivers it raises the water level. It can also provoke landslides.

Displacement: When soil erosion degrades land to the extent that it can no longer support agriculture people are forced to move to other land.

Spread of deserts: As soil is lost vegetation also decreases and so the climate gradually becomes drier. Eventually the land is at risk of becoming a desert.

How can we reduce the amount of soil erosion?

- ✓ **Practising Conservation farming.** when practising CF or Kilimo hai, the land is left untilled. You only prepare holes. This prevents rill erosion in your plot since the soil structures are firm.
- ✓ **Provide soil cover:** ensure that soil is continually covered e.g. plant a cover crop, intercrop (plant two or more crops together on the same land), and practice agro-forestry (growing trees on the same land as crops).
- ✓ **Plant trees:** trees cover and bind the soil, and are the most effective solution.

- ✓ Wamenya haria urenda kwenja marima maku, oya rurigi na woherere tukuniko twa chuba utigani wa 70cm na uguchie rurigi ruu kuringana na uraya wa mugunda waku. Haria tukuniko turi niho gatagati ka irima riaku. Huthira thechi kwenja marima maku. Warie wa raini imwe nginya iria ingi yagiriire gukorwo iri 90cm.
- ✓ Enja marima maku muthetha oroucio wa thima. Marima maya magiriire gukorwo mari ma kona inya. Makorwo mari gatagati ka warie wa 15cm, uraihu wa 35cm na uriku wa 15cm.
- ✓ Ukihanda mbegu ciaku niwega kuhanda na tiri munuru nigetha ikure iri na hinya.

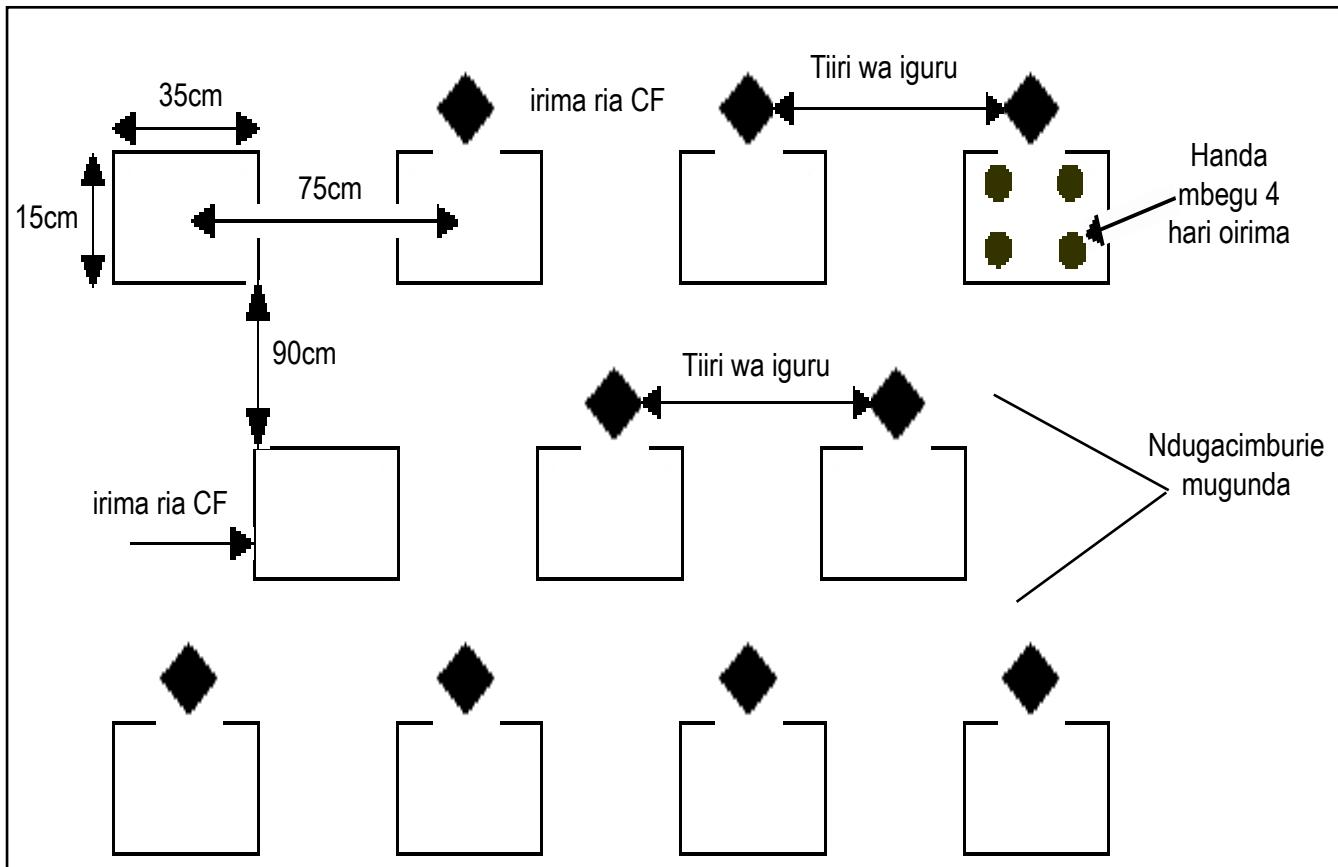

Mumbemba wa TIST akihariria mugunda wake wa conservation farming (CF)

- Niwega guikira thumu na uthike na utigie handu ha uriku wa 5cm.
- ✓ Angikorwo urahanda mbembe niwega gucirikiamai-ini mathaa 6-7 mbere ya kuhanda. Uu nigutumaga cimere naihenya na igatuma cikure nyingi itekura muno. Ukihanda mbegu ciaku, handa mbegu inya ukiranite irimaini. Thika na tiri utukanitio na thumu nginya uraya wa 2.5cm. thutha waguikira tiri uyu, hagiriire gukorwo na utiganu wa 2.5cm kuma haria tiri ukinyite nginya iguru. Mumuthura mathui nigetha tiri unyitane wega na mbegu ciaku.
- ✓ Angikorwo urahanda muhia, handa kuma mbegu 5-6 konaini cia irima riaku. Hum-bira tiri waku na tiri muigana wa 2.5cm utukanitio na thumu.
- ✓ Karima kau uratigia hau iguru gateithagia mai maingire tirini wega riria mbura yoira. Ungiaga gurigia karima gaka mbura ikoira na ikururie tiri uria munuru.
- ✓ Rimagira mumera waku maita maingi. Oro mwaka kurikoragwo na ria rinini.
- ✓ Ndukage hinya, Kwenja marima riu nikuga ati niukamahuthira mwaka uria ungi.

Ndwagiriirwo ni kuhuthira bataraitha hari urimi uyu.

Ndugachimburie mugunda waku. Wagiriirwo no kewga marima tu ta uria mbica ino ironania.

Ambiriria kuhanda miti ya kiunduire mugunda-ini waku na makiria ndere-ini cia ruui.
Na ndukahande miti ya mibau kana minyua mai hakuhi na rui.

Umenyereri na utungata wa tuta.

A. Kugiriria Tutambi

Tutambi twamithemba mi-ingi (ta Muthua na) hamwe na viruses no cithukie mimera yaku muno.

Umwe wa murimu uthukangagia tuta yaku witagwo “damping off” na urehagwo ni “fungi”. Murimu uyu utumaga mbegu cibuthe mbere ya cimerete, miri niyoraga mbere ya mumera ume-rete na ukaga hinya na muthia ukagwa. Ndariri cia murimu uyu ni; -

- ❖ Mumera ugachekeha na ukoma uri omuni-ni.
- ❖ Mumera ukahoha na muthia ukagwa.
- ❖ Mathangu makagia na rangi wa ngoikoni.
- ❖ Mumera ukoma.

No ugiri-rie murimu uyu na njira ici:

- ❖ Ugachenjia tiri wa tuta yaku thutha wa mwaka umwe nginya miaka iri.
- ❖ Irute mimera iria irinamurimu uyu na umich-ine.
- ❖ Ndugekagire mai maingi makiria.
- ❖ Ona ati tuta yaku ndiraraha mai.
- ❖ Wone ati tiri waku niuraingiria riera wega.
- ❖ Urimagire mumera waku kahinda karia kagiri-ire.
- ❖ Ona ati tiri waku tumunoru makiria ma uria kwagiri-ire. Ona ati tiri waku niuhingitie mabataro mothe. Ndugekire thumu muingi muno
- ❖ Ona ati hari hari na utigani muiganu mimer-aini yaku nigetha ndigatumane muno.

Amemba a TIST Small Group makirimira nathari yao

- ❖ Ona ati tuta yaku nitheru mahinda mothe.

Murimu uyu no uninwo na njira ya kuhuthira ndawa. Niwega kuhuthira ndawa ya gwith-ondekeria itari na goro muno na iria itangithukia mariamatuthiururki-irie. Kwa ngerekano.

- ❖ No uitiririe muhu.
- ❖ Ona na kinyi ati tuya yaku nitheru nigetha kugiri-ria tutambi.

B. Gucheha Miri.

Thamagia mumera waku rita rimwe hari oro wiki nigetha muri waitimu ndugatonye tirini. Muri mwega wa itimu niutumaga mumera waku uhote kunyua mai wega thutha wa kuuhanda mugundaini.

Miri ya kamumera gaku niyambagia kuma nya ya karatathi karia uhandi-ire thutha ya mieri 3-4 kuringana na riera ria kuria uhandite muti ucio. Miri ino yagiri-ire kurengwo thutha wa mieri iri. Ririkana kunyita mumera waku na umenyereri munene muno nigetha ndugathukie tumiri turia tunini.

Geria muno kuhuthira tuta iria yoetwo iguru nigetha ndugatindage ugitinia miri yaku tondu miri iri-itinagia oyo miene.

C. Guitirirua mai, Kurimira ham-we na Guikira Kiruru

- ❖ Ikira gichungi hari ndoo ya mai nigetha ndugathukie tiri wa tuta yakuugiitiriria mai.
- ❖ Ndugaitagiririe mai maingi muno.
- ❖ Itagiriria mai rucini na hwaini kungihotekika
- ❖ Menyerera guthukia miri riria urarimira.
- ❖ Ndukarimagire uchereirwo muno tondu ria niri gayanaga utheri, mai hamwe na unoru wa tiri
- ❖ Mimera ingi niyendaga kiruru. Ona ati niwa gitira mimera yaku kumana na riuu inene.
- ❖ Kahinda ka mbura nene, niwega kugitira mimera yaku ukihuthira nyeki. Angikorwo tuta yaku iri rungu rwa muti niwega umi-herie nigetha mimera yaku ndigathukio ni matata ma muti.
- ❖ Gitira tuta yaku kumana na mahiu na ciana.

Utaganu wa Miti yaku

Wega wa kuhanda miti utigani wa mita igiri na makiria.

TIST niikoretwo ikiungania uhoro iguru ria uhandi na utiganu wa kuhanda miti gwa kahinda ka miaka itatu. Nitwonete ati arimi aria mahandaga miti utiganu wa makiria ma mita igiri ni ikuraga wega makiria. Arimi aingi makoretwo makihuthira njira ini na nitwonete ikuraga makiria ma miti iria ihanditwo thi ya utiganu wa mita imwe.

Miti iria ihanditwo thi wa mita imwe ikuraga kahora, igakorwo iriminini na ndiheanaga riera riangi. Kiroto kinene gia TIST ni kuhanda miti iria ikwagiria riera hamwe na kwagiria mugunda wa murimi. Kiroto gitu ti kuhanda miti

ikuhaniri-irie muno iria igutemwo na ihandwo niundu wa kuhuthirwo ta itugi. Arimi aria mahandaga miti makiria ma mita igiri nimonete wega wa utiganu ucio. Miti iria ihanditwo utiganu uyu ndichindanagira mai na unoru uria uri tirini.

Niwega muno kuri arimi a TIST kumenya ati atari a miti maritaraga miti iria ihanditwo nautiganu wa makiria ma mita igiri. Utiganu uu niuheaga kamweke arimi kuhanda makiria ma miti 1,000 hari acre imwe ya mugunda. Uu nitakuga ati miti iria ihanditwo makiri ma mita igiri ni irikuraga ina hinya na igakorwo na ma-

TIST: Mibango miega ya michemanio ya o wiki.

Kwina bata munene inyui ikundi nini gukoragwo na micemanio kaingi. Ta ngerekano, rimwe hari wiki kana rimwe thutha wa wiki igiri. Uu nigukuhe mweke mundu wothe wa gikundi kianyu gukuria gikundi orohamwe na kumenya maundu meru.

Mibango ya michemanio.

Hari kubanga mathaa maitu wega, gikundi kinini kiagiri-ire gukorwo na michemanio ibangitwo wega. Kwina bata munene muno tondu nigugutuma muikare mukimenyaga maria mukaririria na maundu mangi.

Thi-ini ya michemanio, niwega guthingata maundu maria mabata. Nigetha muhote kurikia uu, ikundi ingi nini cia TIST ciekaga maundu maya riria cikoragwo namicemanio.

NJIRA YA I.

Kugeithania na kumenyithania ameba eru. (ndagika 5 – 15): Ona ati mundu wothe niaiganira. woe kahinda kanini no wone ati mundu wothe niemenyekithania.

NJIRA YA II.

Mahoya ma kuhingura (ndagika 2):
Niwega kwambiriria mucemanio waku na mahoya.
Reke makorwo mari makuhi.

NJIRA YA III.

Nyimbo (ndagika 5):
Ici nocikorwo ari nyimbo ciandikitwo ni ikundi cianyu kana ikorwo ari nyimbo cia kugocha.

NJIRA YA IV.

Gwitikaniria wira na mathaa. (ndagika 5):
Atongoria mataragiria uria gugwikwo mucemanio-ini na andu a gikundi magetikira gwika uguo. Mathaa metikanirio nigetha mutabariri ahote kuiga mathaa.

NJIRA YA V.

Ikundi irute wira uria ihetwo. (Itha Rimwe):
Wira uyu wagiriire gukorwo wabangitwo muchemanio-ini muhituku. wira uyu no ukorwo ari guitariria uria mundu ekite guteithia TIST, kurutana oronakana maundu mangi ma bata maria maguteithiriria ikundi cianyu nini ikure.

NJIRA YA VI.

Kujengana (ndagika 5):
Oro mumemba oige kaundu kamwe ka mwanya angikorwo onete muchemanioini oro na kana kiheso onete hari mutongoria.

NJIRA YA VII.

Uria tungigiriria guko gwa tiri ni kiguu.

Guko gwa tiri ni kiguu ni guteyaga mai kana ruhuho.

Niki kirehaga guko gwa tiri ni kiguu.

Gutemanga miti gutigaga tiri utari muhumbire. Kurima mugunda ni guteyaga tiri na gukarehe guko gvatiri ni kiguu. Tiri tocio ndungiteithia guko gvatiri ni kiguu otiga tuhandire miti kana mimea.

a) **Gutemanga kwa miti ni guthukagia mugunda:** Migunda teo timiega na urimi, tamugunda muinamu. Hindi iria andu marageria kuanda mimea tiri ndunghota

gweterera guthukangio na kunyihia udu uria munene.

b) **Uriithi wa mahiu.** Hindi iria nyamu nyingi ciretikirio kuhuthira mwena umwe wa mugunda nigukoraguo na wagi wa mimea na guthii na mbere tiri guko ni kiguu.

c) **Utemangi wa miti :** Hindi iria miti ya temenguo mugunda tiri utigaguo uteri muhumbire na kunyihia undu uria munene.

Maumirira.

Wagi wairio: Guko gvatiri ni kiguu ni kunyihagia tiri uria munoru na kunyihia magetha.

Guthukia mai: Tiri waingira mai-ini niuthuburaga kuria nyamu cikaraga, ukaingira mai-ini makunyua ,na gukua ndawa iria ihuthirituo tirini-ini nginya maria mai mageragira.

Maugwati. Guko gvatiri ni kurehaga muiyuro wa njui. Hindiria tiri weiga githma-ini na rui githimo kia mai ni kiongererekaga. nirehaga mugunda muinamu

Guthama: Hindi iria tiri wakuo ni kiguu nighukagia mugunda nginya ndiri hindi

Uhandi wa miti thigiririkaini cia njui niguteithigia ugitiri wa tiiri.

ingiteithiriria arimi na gutuma mathii migundani ingi.

Kuongerereka kwa migunda miumu: Hindiria tiri wate mimea na kunyihia ,kwoguo weru-ini gagatuika kumu.muico-ini mugunda ugatuika mumu.

Tunginyihanyihia atia wongererekwa wa gutwaruo gwa tiri ni kiguu

✓ **Urimi wa Kilimo hai kana CF (conservation farming).** Riria ukurima kuhuthithira njiro ino ya CF, ndwagiriirwo ni guchimba mugunda waku. Uria wagiriirwo ni kwenja marima kuringana na ithimi iria uthomithitio. Njira ino niirigagiria guko gwa tiiri ni kiguu tondu tiiri ukoragwo unyitanite.

✓ **Kuhuthira mulching:** kumenyerera tiri ni mugitire mahinda mothe kwa muhiano, Handa mimera mithemba itahianaine(handa mithemba iri kana mingi hamwe mugunda-ini umwe)na kuanda miti na irio thi-ini wa mugunda waku

✓ **Kuhanda miti:** Miti nihumbagira na kurumia tiri,na njira iria njega ya kuhuthiruo.
