The **TREE** is a monthly newsletter Published by **TIST** Uganda, a project area of **The International Small Group and Tree Planting Program**.

MISSION STATEMENT:

TIST Uganda is a community initiative dedicated to empowering small groups of subsistence farmers to combat the devastating effects of deforestation, poverty and drought.

OBJECTIVE STATEMENT:

Combining sustainable development with carbon sequestration, TIST supports the reforestation efforts of over 25,000 subsistence farmers. Sales of carbon credits generate participant income while TIST today also addresses Agriculture, HIV/AIDS, Nutrition and Fuel Wood challenges.

ADDRESS:

*TIST Uganda.

TIST HOLDS MEETINGS IN ATLANTA GEORGIA-USA

2nd – 11th April 2018. TIST was represented by Jeniffer Kithure and Alphaxard Kimani of Kenya, Pamela Barigye of Uganda, John Ambler, Vannesa Henneke and Ben Henneke from USA. We had a chance to hold meetings in Atlanta, Georgia, USA with Delta Airlines, which is the leading airline in the world. We also had classes with Emory University, Westminster School, and Georgia Institute of Technology.

We also visited the Coca-Cola headquarters and museum, which apparently is the world headquarters of Coca-Cola, plus the Atlanta Botanical Gardens and Delta Airlines Museum.

At Delta Airlines, “who are one of our carbon buyers”, we held a meeting with Delta staff who came to learn about TIST activities and achievements. As farmers and leaders from East Africa, we shared with them our experiences and gave our views as TIST leaders in our countries both in presentations and on video. There was another presentation from Tree Zero, a company where they make printing paper from wastes of sugar cane.

We had another very important meeting with the Delta Executives. Ben gave a presentation on TIST progress and we all had a chance to share our experiences as farmers and leaders from our countries where TIST Program is operating.

We visited the Delta museum, where we saw the history of Delta and we learnt of the new biggest plane which they have invented, called the “Queen of the Sky”. We were taken to a cockpit simulator with Captain Smith and we were presented a certificate for successfully flying the simulator, which was a big excitement to us. We look with optimism to increase our carbon sales with Delta, which will help us pay 70% profit with our TIST farmers.

We went to Westminster School, and talked with students 6 -12 years old. A Delta Airlines executive organized for us to visit this school because her daughter is a student at there and she had interest in TIST. She had watched TIST videos and really wanted to see us physically and have us visit her school. We had meetings with four junior classes, all of which are learning about Kenya, and shared our experience as TIST farmers. The students were excited and asked many questions about animals and what kind of food/fruits we grow and listened intently to what we had to share. There's hope that these children will be nature stewards in future.

We attended an inspirational talk on entrepreneurship from Global Good Fund CEOs, and Impact Fund, held at Emory University, a school majoring in medicine and business. This also is an opportunity for TIST family who are innovative and can apply for the innovation fund. You can find information by checking “Google-global good fund”. In another meeting, we attended a class of environmental science at Emory University, where we shared our experiences as TIST farmers and leaders. We showed students the TIST website and a PowerPoint. They were eager to know more about TIST and had many questions. This helped us to achieve our COS, which was to make the students accept they can also do an activity to mitigate effects of climate change.

We visited Georgia Institute of Technology, another university which majors in technology. We had students ranging from biochemistry to mechanical engineering. We took the students to the TIST website and gave a PowerPoint presentation and had a chance to share our experiences as TIST farmers and leaders. Wherever we went, people welcomed us and were eager to learn about what we and TIST are doing.

We learnt some exciting things during our visit in USA:

- We visited Coca-Cola museum and Atlanta Botanical Gardens, where we saw trees as old as about 100 years, which excited us as TIST farmers.
- People in USA pay for their very old trees in compounds to be cut and removed, instead of being paid. The price of cutting a tree is a minimum of ksh: 45,000, ugshs: 1,620,000/=.
- Atlanta has many trees planted. It is a city with a dense forest.
- Delta Airlines, as one of our carbon tonnes buyers, is willing to help TIST farmers expand and we hope they will increase the number of tonnes they purchase.
- We shared our experiences with students as leaders and how we have been groomed by TIST into leadership - especially women - through seminars and rotational leadership and building each other with “Kujengana”. We talked about how excited farmers are when signing payment vouchers and sharing the trees incentives and also other benefits.
- We encouraged them to “GO and DO”!

By Barigye Pamela

EVERYONE NEEDS TIST

TIST is an organization that deals with farmer in the fields of planting trees, conservation farming and other trainings like HIV/AIDS awareness, Rotational leadership in our groups and many others that affect our daily lives positively.

Why do we need TIST?

Everybody that God created was given authority to co create and look after what he was given by God including trees and water on earth.

TIST gives us chance as farmers to get together and form small group that end up us in many ways not only planting trees.

TIST Ugandan mostly has improved the lives of farmers through getting incentives from tree counts and training and on how to make nursery beds and tree planting

TIST is not for the rich, poor, young and old but is for all Let us plant trees for the better life.

Together we can

By Arinaitwe Ezra

TIST MITIGATES CLIMATIC CHANGES THROUGH CONSERVATION FARMING

TIST Uganda is one of the most successful programs that is going to be able to mitigate Climatic changes in Kinaba and Kanungu at large through conservation farming

This method involves the digging of holes. Seeds are directly planted along with some organic manure. Crops aside and are retained and staple crops are rotated or inter cropped. Conservation farming has a promising means of increasing yields, conserving soil and water resources in Kinaba and Kanungu at large.

Conservation farming is a farming system that is going to be practiced by more than 1000 farmers in Kinaba and Kanungu at large. And it has been proved to increase food security in an environmental sustainable way. In relation to the fertility of the soil, conservation farming increases the fixation of carbon in the soil.

Conservation field can act as a sink of carbon and reduce emission in the atmosphere. Conservation, yield stabilization, reduces machinery use and lowers the cost compared to other cultivation systems.

TIST farmers have noticed a positive influence on crop yields, soil fertilization and erosion.

TIST farmers are proud to inform you that small holder farms using conservation practices are going to contribute mitigation against climatic changes.

Never the less the system increases the house hold food security economic and well being.

By Bwire Twesigomwe Willy Cluster leader Kinaba Sub county.

BENEFITS OF TIST TO SMALL GROUP FARMERS

TIST has trained farmers on different methods of tree planting and areas where to plant trees. For example TIST trained farmers about planting trees in land boundary for example in banana plantations. Also planting trees in farm so that those trees can provide shade for animals.

When TIST started farmers were trained and encouraged to plant trees which later contributed to change in climatic season thus reducing on the dry season that we used to farmer's way back before TIST program.

TIST started a method of tree payments to farmers for every live tree which encouraged farmers not to harvest the trees they plant for TIST program.

TIST also introduced conservation farming system which was greatly adopted by many farmers. Also this system increased yield production among family house hold and the surplus can be sold for income.

By: Nuwagira Micheal

GREAT NEWS FOR SMALL GROUPS WORKING IN CLUSTERS

Payment system and process has finally been changed, every six months there is going to be voucher generation for SG payments. Payments will be done in clusters during cluster meetings that are held every month in Uganda. When vouchers for small groups are generated, they will be sorted according to their clusters and cluster servants will carry the vouchers to the cluster meeting venue for signing during trainings and meetings.

The Cluster servant will give the voucher to the 3 small group representatives to take home for signing by other group members and that voucher will then be returned to the cluster servant in the next cluster meeting for verification.

The cluster servant will verify: *Signatures of the small group representatives, phone number in which to deposit the small group payment, national identification numbers for the 3 small group representatives.*

The Cluster servant will notify the office after verification of the signatures and phone numbers on the vouchers and the payment will be made through mobile phone by the office representative. Cluster servant returns voucher to the office for filling.

Small group Payments will be every month during cluster meetings until all the vouchers generated are finished by issuing 20% of the generated voucher every month.

When some of the vouchers are not signed by the group members, they will be voided, that small group will not be able to receive payments until six months are over. Small group members you are encourage not to miss such a big opportunity of payments, meetings and trainings in your clusters.

Come three, come all and enjoy the benefits of TIST program.
