Development and Community Forestry
Program.

This is how Kianjagi Cluster meeting was this day of 5th April 2019. This cluster meets every 1st Friday of every month. We are just neighboring Mt.Kenya Forest on the windward side. Pay us a visit and learn more about TIST Carbon credits under our Cluster Servant Festus. We are Honest, Transparent, Accurate, Accountable, Servants to each other and more so we are volunteers

How TIST Works to Achieve Sustainable Development Goals.

TISTVision has always been to empower Small Groups of subsistence farmers to reverse the devastating effects of deforestation, drought, and famine. TIST farmers work together to identify local sustainable development goals that include tree planting and sustainable agriculture. TIST creates a communication and administrative structure that also addresses health (including HIV/AIDS), education, and nutrition.

Most TIST farmers feel the work they are doing is closely matching the global goals popularly known as **Sustainable Development Goals (SDGs)**. The **Sustainable Development Goals (SDGs)**, officially known as transforming our world: the **2030 Agenda for Sustainable Development** is a set of 17 “Global Goals” with 169 targets between them. They are spearheaded by the United Nations through a deliberative process involving its 193 Member States.

The 17 SDGs are listed below, together with TIST Contribution in italics:

Goal 1: No Poverty

No Poverty - End poverty in all its forms everywhere

- Extreme poverty has been cut by more than half since 1990, however, more than 1 in 5 people live on less than \$1.25 a day.
- Poverty is more than lack of income or resources. It includes lack of basic services, such as education, hunger, social discrimination and exclusion, and lack of participation in decision-making.
- Gender inequality plays a large role in the perpetuation of poverty and its risks. They then face potentially life-threatening risks from early pregnancy, and often-lost hopes for an education and a better income.
- Age groups are affected differently when struck with poverty. Its most devastating effects are on children, to whom it poses a great threat. It affects their education, health, nutrition, and security. It also negatively affects the emotional and spiritual development of children through the environment it creates.

What TIST Farmers have done

Many TIST farmers have made their degraded land productive again. Through tree planting, Conservation Farming (CF) and Agro forestry

practices, thousands of hectares of small farms have gained fertility and productivity.

- *Though rotational and servant leadership is all service and leadership points of TIST, both women and men have gained equal access to opportunities and benefits.*

Goal 2: Zero Hunger

Zero Hunger - End hunger; achieve food security and improved nutrition and promote sustainable agriculture

What TIST Farmers have done

- *Many TIST farmers have practiced Conservation Farming. Majority of them have reported increased yields through CF.*
- *Today, thousands of TIST farmers who have planted fruit and nut trees are reporting good harvest of fruits and nuts thereby increasing their nutritional supply for their families.*

Goal 3: Good Health and Well-being

Good Health and Well-being - Ensure healthy lives and promote well-being for all at all ages

What TIST Farmers have done

TIST farmers through seminars and Cluster trainings receive HIV and Aids, malaria, nutritional, hygiene trainings, etc. They encourage and support those in need.

Goal 4: Quality Education

Quality Education - Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all.

What TIST Farmers have done

- *In TIST, we have heard farmers sharing stories of how tree payments incentives help with school fees and or learning materials.*
- *TIST Mazingira Bora Newsletters and training at Clusters promote lifelong learning opportunities.*

Goal 5: Gender Equality

Gender Equality - Achieve gender equality and empower all women and girls

**What TIST Farmers have done**

- At the Small Groups, Cluster level, GOCC and LC level, members practice rotational leadership, thereby giving women more empowerment.
- In TIST, the number of women working and serving farmers is even. Women have equal opportunity for leadership training, etc.

Goal 6: Clean Water and Sanitation

Clean Water and Sanitation - Ensure availability and sustainable management of water and sanitation for all.

What TIST Farmers have done

- Through Riparian program that was received well by farmers whose land touch on water ways, many of them reported increased water quality and quantity.
- At Cluster meetings and through newsletters, farmers share a lot of ideas of how to improve hygiene and sanitation.

Goal 7: Affordable and Clean Energy

Affordable and Clean Energy - Ensure access to affordable, reliable, sustainable and modern energy for all

What TIST Farmers have done

- When TIST introduced clean stoves, most farmers embraced them because they were affordable and helped save wood fuel and reduced smoke in the cooking areas.
- Through pruning and thinning of trees, farmers are now able to get sustainable fuel source - wood, and improved ways to use

Goal 8: Decent Work and Economic Growth

Decent Work and Economic Growth - Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

What TIST Farmers have done

- TIST farmers led program has engaged more than 150 persons with flexible hours to allow continued management of primary asset - the farm.
- As trees matures, they continue to provide valuable income to support livelihood through sale of fruits, nuts, honey, wood products, etc...
- Cash income via tree payment incentives.

Goal 9: Industry, Innovation and Infrastructure

Industry, Innovation and Infrastructure - Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

What TIST Farmers have done

TIST use of innovation, Information Technology and existing transport to allow youth, women, and men to immediately access new 'industry' (carbon) and create a 'virtual cash crop', which eliminates infrastructure limitations and restores productivity of degraded lands

Goal 10: Reduced Inequalities

Reduced Inequalities - Reduce income inequality within and among countries

What TIST Farmers have done

- TIST farmers have shown incredible support for youth and women especially at the Cluster meetings
- Tree incentives are additional income to the farmers, increased income through improved yields, making degraded land productive again, etc.

Goal 11: Sustainable Cities and Communities

Sustainable Cities and Communities - Make cities and human settlements inclusive, safe, resilient and sustainable

What TIST Farmers have done

- TIST farmers have embraced diverse cultures working closely with different languages, communities and supporting one another.
- TIST values encourage inclusion, safety, and sustainability

Goal 12: Responsible Consumption and Production

Responsible Consumption and Production - Ensure sustainable consumption and production patterns

What TIST Farmers have done

TIST have improved land fertility though CF, compost manure, agro forestry thereby increasing production sustainably, and provide for consumption

Goal 13: Climate Action

Climate Action - Take urgent action to combat climate change and its impacts by regulating

emissions and promoting developments in renewable energy

What TIST Farmers have done

- **Today, TIST farmers worldwide have planted 16+ Million trees, thereby improving adaptation strategies to cope with vagaries of climate change**
- **Today, out of tree planting efforts, TIST farmers have removed over three million tonnes of CO₂ from the air.**

Goal 14: Life Below Water

Life Below Water - Conserve and sustainably use the oceans, seas and marine resources for sustainable development

What TIST Farmers have done

A significant number of farmers have planted water friendly trees in wetlands and along the waterways thereby protecting aquatic life

Goal 15: Life on Land

Life on Land - Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

What TIST Farmers have done

TIST farmers have planted millions of biodiversity enhancing trees and kept alive, bee habitats have thrived, agro forestry, degraded land put into productive use again.

Goal 16: Peace, Justice and Strong Institutions

Peace, Justice and Strong Institutions - Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

What TIST Farmers have done

TIST works with diverse communities, promoting cohesion through Cluster meetings, TIST Values!

Goal 17: Partnerships for the Goals

Partnerships for the Goals - Strengthen the means of implementation and revitalize the global partnership for sustainable development

What TIST Farmers have done

TIST works with different partners including Taylors of Harrogate

TIST: Waste Management.

Waste is any material that is a byproduct of human activity and that may not have immediate value, which includes:

- Human excreta/waste
- Domestic rubbish like left over food
- Waste paper
- Scrap metals, old batteries (dry cells)
- Polythene bags
- Sewage sludge etc.

What Causes Rubbish Problems in your Community?

Waste is inevitable but is made more problematic by:

- Wasteful/inefficient use of resources
- Lack of methods for reusing waste
- Lack of waste disposal sites (Rubbish pits latrines)
- Lack of knowledge about the dangers of waste management.

Problem caused by poor waste management:

- Litter of fields and compounds

Loss of beauty of the area

- Pollution of water, air and soil - disease outbreak
- Blockage of drainage channels
- Toxic poisoning and fumes from old batteries
- Children and animals may be poisoned or injured if they pickup and play with old batteries or other rubbish.

What Can Your Small Group Do Help Solve the Problem

- Reduce or minimize the generation of waste
- Consider using solar powered products instead of those that use disposal batteries when possible
- Reusing-use materials again where possible. (i.e., plastic bags)
- Composting -save organic waste left over food and fodder) as natural fertilizer for use in gardening
- Dig a rubbish pit in your compound
- Remember only to burn paper and cards
- Do not burn batteries as they can explode, put them into the pit latrine

TIST: Sustainable Development.

Global Environmental Overview

Kenya does not exist in isolation from the rest of the world and having knowledge about world environmental problems can help to identify future risks to Kenya. It is important to look at the world's environmental problems and understand the negative effects on our environs.

Climate Change

The burning of fossil fuels (coal, oil, natural gas) produces carbon dioxide. This traps heat in the atmosphere causing the earth's temperature to increase, polar ice caps start to melt and the sea level rises. This results in an increased risk of flooding and increasing temperatures which have negative effects for agriculture in parts of the Africa continent and the world.

Air Pollution

Poisonous fumes from industries and vehicles can cause respiratory problems to people. The fumes can dissolve in rainwater forming acid rain, which damages plants and buildings. Many cities have problems with smoke where the pollution hangs over the city like low-lying clouds or mist that reduces visibility and causes health problems.

Water Pollution

Industry waste, sewage and chemical fertilizer waste from farmers can enter streams, rivers and oceans polluting the worlds water sources and causing harm to plants, animals and human health.

Decreasing Biodiversity

Biodiversity means the total variety of all different plants and animal species.

Pollution and deforestation decreases the number of living species with over 100 species become extinct each day. This reduces resources used for materials energy and medicine.

Desertification

When land loses all vegetation and the soil becomes dry and blows or washes away, land becomes less productive. This is also known as the 'spread of deserts' turning fields and pastures into barren wastelands encompassing many hectares of land areas, which are potentially at risk.

Hazardous Waste

Toxic and poisonous waste can come from factories

using chemical or radioactive materials. The waste harms all ecosystems through disasters such as when a Union Carbide pesticide factory leaked chemicals in Bhopal, India, causing the factory to explode.

Acid Rain

Already mentioned under air pollution, acid rain destroys forests and lakes especially in Europe and North America. When pollution dissolves in water it makes the rain acidic. Trees, plants, fish and even buildings are all affected.

Ozone Depletion

Certain chemicals like chlorofluorocarbons (CFCs) are used in products for refrigeration and other industrial processes but are now found to destroy the ozone layer. The Ozone layer protects the earth from harmful sunrays known as ultra-violet rays (UV). When the chemicals destroy the ozone layer, increased levels of UV rays can reach the earth's surface and are harmful to human health causing skin cancer and other illnesses.

Urban Problems

Many towns and cities suffer from litter, air pollution, noise pollution, congestion and decreasing areas of countryside.

Resource Depression

Increased energy and material requirements throughout the world are causing natural resources like oil, coal, minerals and forests to become depleted. This encourages competition for resources causing increased international conflict. Finding more resources for energy requirements will soon become a big problem unless alternative sources of energy are used like water, wind or nuclear energy instead of using finite resources of oil, coal and gas.

Ask the Cluster participants these questions:

Does Kenya suffer the bad effect of some of these problems?

Does Kenya contribute toward or cause any of these problems?

As Kenya develops, which global environmental problems do you think will become worse?

Encourage your TIST Clusters and other community members to plant more trees to minimize some of these climatically bad effects so our environment can be better!

Preparing Compost Manure - a natural fertilizer.

Compost manure is a natural fertilizer that helps your crops grow. It is better than chemical fertilizer because it is natural, free, and will not damage crops and the environment as some chemical fertilizers can. There are many ways to make compost manure, but the following method has been useful in some areas. Ask your neighbors in your Cluster what has worked well for them.

Preparation of compost:

- I. Choose an area for your compost pit measuring 4m by 4m.
- 2 Clean the area.
- 3 Dig a hole of diameter 3 - 4m and 1.5m deep.
- 4 Collect all the remains of the crops you have (e.g. leaves and stalks of maize, millet, beans) and cut these remains into small pieces.
- 5 Put these crop remains into the hole up to a depth of 0.5m.
- 6 Add 5 liters of ash.
- 7 Next add about 30cm (or as much as available) of animal dung (e.g. dung from pig, cow, goat or chicken).
- 8 Put another layer of crop leaves and stalks (0.5m).
- 9 Add another 5 liters of ash.
- 10 Repeat adding the leaves and stalks again until the hole is almost filled.
- 11 Finally add a layer of soil until the hole is filled.
- 12 While filling the hole with soil, put a long stick in the middle of the hole so it reaches the bottom.
- 13 Leave the compost pit for 90 days (3 months).
- 14 During this period use your dirty water to water the compost pit. For example, after cleaning your house or clothes, empty the used water over the compost pit. If you have animals, you can also pour animal urine over the pit.
- 15 This adds extra nitrogen to the compost.
- 16 Try to water the compost pit in this way every day, or whenever water is available.
- 17 After 90 days the manure will be ready.

Use the stick as a thermometer – when the compost is ready it should be hot and you may even see steam coming from the stick after you have removed it.

Use of compost:

When you have dug your holes for planting maize, millet or other crops, add one handful of your compost manure to each hole. Watch for the results!

Witi na mbele bukumbika.

Gutegeera mazingira ndene ya nthiguru yonthe.

Nthiguru ya Kenya itithagirwa iri antu amwe yonka kuraja na nthiguru ingi na kwithira irina umenyo bwegie thina cia nthiguru yonthe ciegie naria kuthiurukite nogutethie kwonera thina iria cikwenda kwija Kenya kuraja. Burina bata gutega thina cia naria kuthiurukite na kwelewa mantu jamathuku kiri naria gututhiurukite jaria jejanagia na thina iji.

Kugaruka kwa rera.

Kuithua kwa maguta (maguta ja maiga, maguta jongwa na gasi ya gintwire) nikurita ruugo rwa kaboni. Ruru nirugwatagia kirutira ndene ya nthiguru na gutuma murutira jwingia, mitwe ya irima ya nkamia kwambiria gukeruka na ruuji ndene ya iria kwongereka. Jaja nijaongagira kuigara kwa ruuji rwa mbura na kwongera murutira, mantu jaria jaretaga thina kiri urimi ndene ya Afrika na nthiguru yonthe.

Kuthukua kwa ruugo.

Toi cirina sumu kuuma kiri kambuni cia kuthithia into na ngari noirete thina cia gukucia miruki kiri antu. Toi iji nocitorye ruujine rwangai na kuthithia ngai ya acidi iria ithukagia imera na nyomba. Tauni inyingi cirina thina ya toi niuntu niitagia iguru igakara ta matu jamarito kana ta nduumi iria itumaga antu baremwa kwona kuraja na iria iretaga thina cia mwili.

Kuthukua kwa ruuji.

Ruuko kuumania na factory cia kambuni na ruuko na fertilizer kuuma kiri arimi norutonye nduuojine na iriene na kwou rukathukia biumo bia ruuji bia nthiguru yonthe na kugitarria imera, antu na thiria ya antu.

Kunyiyia mithemba ya imera na nyomoo iria igukaraniria.

Biodiversity ni mithemba yonthe mwanya ya imera na nyomoo.

Kuthukia na kugiita miitu nikunyagia mithemba ya biumbe biria bira moyo na gutuma nkuruki ya mithemba igana mwanya ithira buru nthigurune o ntuku o ntuku. Bubu nibunyiagia into biria bitumagirwa kuruga na ndawa.

Gutamba kwa uumo.

Riria muunda jwathia imera na muthetu jwooma na jwakamatwa, muunda nijunyiagia unoru. Gutamba guku kwa uumo nikugaruraga miunda na antu a kuriithia gukaa antu guticiara kinya mbi na nokujukie hectare inyingi cia munda, juria juri akui.

Ruuko ruria rugitaragia na njira inene.

Ruuko rumba kwajithia kana rurina sumu kuuma kiri factory iria igitumira chemical kana into bingi biria bitibui kiri thiria ya mwiri. Ruuko ruru nirugitaragia into bionthe biria bira moyo gukurukira mantu jaria jatieteretwe, mung'unano, riria factory ya kiama ya kuthithia ndawa ya iria yeeturire chemical iji naria Bhopal ndene ya India, factory niyalipukire.

Ngai ya acidi.

Nigwetetwe au iguru kiri kuthukia ruugo, ngai ya acidi nigaragia miitu na nduuji mono ndene ya Europe na North America. Riria ruuko ruru rwatonya ruujine na rwatuma ngai igia acidi, miti imera, makuyu na kinya miako nigaragua.

Kuthiria nkuniki ya ozone.

Chemical imwe ja CFC nitumagirwa kiri into biria bitumagira nikenda into biungwa gwika igitu riraja bitirathuka na kiri kuthithia into bingi, indi nandi nimenyekene ati nicithukagia nkuniki iu ya Ozone. Nkuniki iji niithaga nthiguru kuumania na miale ya riua iria igitaragia iria itagwa ultra-violet rays (UV). Riria chemical iji ciathukia nkuniki iji, riua ririthuku ria UV nirikinyagira nthiguru na rikagitarria thiria ya mwili ya antu na gutuma bajua ni cancer ya ngozi na mbajua ingi.

Thina cia tauni.

Tauni inyingi ciri thina cia ruuko, kuthukua kwa ruugo, gituma, kwangia gwa antu na ngari na kunya kwa naria gutina nyomba cia biashara.

Kuthirua kwa into bia gutumira.

Kwongereka gwa utumiri bwa maguta na nkuu na into bingi nthigurune yonthe ja maguta, maguta ja maiga, na miitu no gutume into bibi bithire. Untu bubu nibwongagira gushindanira into bibi na kwou ndua cia nthiguru ikaingia. Gucua into bibi bia gutumira akui mono gukareta thina mono tiga aki into bingi bigatumirwa antua bibi, into bibi ni ja ruuji, ruugo kana nuclear antu a gutumira biria biumba kuthira ta maguta, maguta ja maiga na ngasi.

Aritani, ureni amembba ba cluster biuria bibi:

Kenya nionaga mantu jamathuku jaria jaumanagia na imwe cia thina iji?

Hivi ndivyo mkutano wa Kianjagi Clusta ulikuwa tarehe 5 - 4 - 2019. Clusta hii hukutana kila Ijumaa ya kwanza ya kila mwezi. Tuko jirani na msitu wa Mlima Kenya upande wa upemo. Tutembelee tukujuze mengi kuhusu TIST Carbon Credits ilioyo chini ya Mutumishi wa Clasta Festus. Sisi ni waminifu, uwazi, sababa, watumishi kwa kila mtu na kujitolea.

Jinsi TIST Inavyofanya Kufanikisha Malengo ya Maendeleo Endelevu.

TIST ilianzishwa na wakulima wadogo ili kuwawezesha kuunda vikundi vidogo vinavyoweza kuwasaidia kutupilia mbali madhara mabaya ya ukataji miti, ukame na njaa. Wakulima wa TIST wanafanya kazi pamoja ili kutambua vitendo vya maendeleo endelevu vinavyojumuisha kupanda miti na kilimo endelevu. TIST inaunda miundo ya mawasiliano na utawala ambayo pia inashughulikia afya (ikiwa ni pamoja na VVU / UKIMWI), elimu na lishe.

Mwezi uliopita, nilikuwa na fursa ya kuwakilisha TIST kwenye mkutano wa Carbon Afrika Forum uliofadhiwa na UNFCCC, Nairobi Framework Partnership na UNDP kati ya wengine. Mkutano huo ulifanyika Conotou, Benin, Afrika Magharibi. Nilizungumzia juu ya faida za matendo ya mazingira yanayolenga Mafanikio ya SDG almaarufu (*Co-benefits of Climate Action on the Achievements of SDG*). Kama sehemu ya maandalizi yangu na kujua kuwa watu wanaohudhuria wangekuwa wakijadili Malengo ya Maendeleo Endelevu (SDGs), nimefanya utafiti na kuchunguza kwenye Wikipedia. Ninataka kuwajuza yale niliyojifunza, na kuomba usaidizi kutambua njia ambazo TIST inachangia kwenye Malengo hayo, na kupendekeza njia ambazo TIST inachangia hata zaidi nyakati zijazo.

Malengo ya Maendeleo Endelevu (SDGs), yanayojulikana rasmi kama **kubadilisha dunia yetu: Agenda ya 2030 ya Maendeleo Endelevu** ni mojawapo ya 'Malengo ya Kimataifa' kumi na saba (17) yenye Malengo mia moja sitini na tisa (169) kati yao. Inachangiwa pakubwa na Umoja wa Mataifa kupitia mchakato wa makusudi unaohusisha majimbo yake mia moja, tisini na tatu (193). Malengo hayo ya Maendeleo kumi na saba (17) yameorodheshwa hapa chini. Tafadhali uyatathmini. Nimeweka mawazo ya hapo awali kutoka kwa watu wengine kuhusu jinsi TIST inaweza kuchangia katika italicics ili kuongeza:

Lengo la 1: Hakuna Umaskini

Hakuna Umasikini – Kuondoa umaskini wa aina wowote, kila mahali.

- Umaskini uliokithiri umekatwa kwa zaidi ya nusu tangu mwaka wa 1990, hata hivyo, mmoja kati ya watu watano (5) wanaishi chini ya dola 1.25 kwa siku.
- Umaskini ni zaidi ya ukosefu wa kipato au rasilimali. Inajumuisha ukosefu wa huduma za msingi, kama elimu, njaa, ubaguzi wa kijamii na kutengwa, na ukosefu wa ushiriki katika maamuzi.
- Usawa wa kijinsia una jukumu kubwa katika kuendeleza umaskini na hatari zake. Wanawake wanakabiliwa na hatari zinazohatarisha maisha kutoka mimba za awali, na matumaini potevu ya elimu na mapato mazuri.
- Vikundi vya umri vinaathiriwa tofauti na umasikini. Madhara yake huwa makubwa zaidi

kwa watoto, ambao huwa tishio kubwa. Inathiri elimu, afya, lishe, na usalama. Pia huathiri vibaya maendeleo ya kihisia na kiroho ya watoto kupitia mazingira ambayo yanajengwa.

Tunataka pia kujua mawazo yako kuhusu jinsi wakulima wa TIST au jinsi mafunzo ya TIST yanaweza kuboresha michango yetu kwa SDG zilizotajwa - ili tuweze kuwa na MATOKEO BORA kwa Bajeti ya Chini!

Mtumishi wako wa Cluster atakuwa na majadiliano kwenye mkutano wa Cluster unaofuata, na ataandika barua pepe kwangu kuhusu mapendekezo yako na matokeo.

Usimamizi wa taka.

Taka ni kitu chochote kinachotokana na mazi za binadamu na yaweza kukosa utumizi wa mara moja, na ni pamoja na:

- Choo cha binadamu.
- Uchafu wa nyumba kama mabaki ya chakula.
- Makaratasi yasiyotumika.
- Mifuko ya mpira.
- Chuma, betri zimeisha (seli kavu).
- Maji taka sludge nk.

Ni nini husababisha shida za taka katika eneo lako?

Taka haiwezi kuepukika lakini yafanywa kuwa shida zaidi na:

- Matumizi mabaya ya rasilimali.
- Ukosefu wa njia za kutumia tena.
- Ukosefu wa mahali pa kutupa taka (mashimo ya taka, vyoo vya kuchimba).
- Ukosefu wa ujuzi wa hatari za usimamizi mbaya wa taka.

Usimamizi mbaya wa taka husababisha.

- Uchafuzi wa mashamba na viwanja, kupoteza urembo wa eneo hilo.

- Uchafuzi wa maji, hewa na udongo.
- Kuenea kwa magonjwa.
- Kufungana kwa paipu za kuondoa maji taka.
- Sumu na moshi mbaya kutokana na betri nzee

Watoto na wanyama waweza kupata sumu au kuumizwa wakiokota na kucheza na mawe mazee na taka nyinginezo.

Kikundi kidogo chako chawenza kufanya nini kutatua shida hii?

- Kupunguza kutengeneza kwa taka.
- Fikiria kutumia vifaa vinavyotumia nishati kutokana na jua badala ya nishati inayotokana na betri inapowezekana.
- Kutumia tena – tumia vitu tena inapowezekana (mfano, mifuko ya mpira).
- Kutengeneza mbolea – weka uchafu unaooza (mabaki ya chakula cha binadamu na cha mifugo) kama mbolea ya kutumia katika kulima.
- Chimba shimo la taka kiwanjani mwako.
- Kumbuka kuchoma makaratasi na kadi pekee. Usichome betri kwani yaweza kulipuka. Yaweke katika vyoo vya shimo.

Maendeleo Endelevu.

Kuangalia mazingira ya dunia kwa ufupi.

Kenya haijatengwa kutokana na sehemu zingine za dunia na kuwa na ujuzi kuhusu matatatizo ya kimazingira ya dunia nzima kwaweza kusaidia kutambua hatari kwa Kenya kwa umbali. Ni muhimu kuchambua matatatizo ya dunia ya kimazingira na kuelewa madhara hasi yanayoweza kufikia mazingira yetu.

Madaliko ya hali ya anga ya muda mrefu.

Kuchoma ngataa au mafuta (makaa yam awe, mafuta, gesi asilia) hutoa hewa chafu ya kaboni. Hii hewa hutega joto katika anga na kusabasisha joto duniani kuongezeka, kofia za barafu katika maeneo ya milima kuanza kuyeyuka na kiwango cha maji katika maziwa kupanda. Haya husababisha uwezekano wa mafuriko na joto kupanda jambo ambalo huwa na athari mbaya kwa kilimo katika sehemu za bara la Afrika na dunia nzima.

Uchafuzi wa hewa.

Mafusho yenye sumu kutoka viwandani na kwa magari yaweza kusababisha shida za kupumua kwa watu. Mafusho haya yaweza kuingia katika maji ya mvua na kutengeneza mvua wenye asidi, ambao hudhuru mimea na mijengo. Miji mingi huwa na matatizo ya moshi ambapo machafuko hutanda juu ya miji kama mawingu ya chini na kupunguza uwezo wa kuona mbali na kusababisha shida za kiafya.

Uchafuzi wa maji.

Maji na uchafu kutoka viwandani na kemikali kutoka kwa wakulima zaweza kuingia katika vijito, mito na maziwa na kuchafua vyanzo vya maji vya dunia nzima na kudhuru mimea, wanyama na afya ya binadamu.

Kupunguza bionuwai.

Baonuwai ni wingi wa aina mbalimbali za mimea na wanyama. Uchafuzi na kukata miti hupunguza nambari ya viumbe hai na kumaliza zaidi ya aina mia moja kila siku. Jambo hili hupunguza rasilimali inayotumika kama vifaa, nishati na dawa.

Kuenea kwa jangwa.

Ardhi inapopoteza mimea na udongo unapokauka na kubebwa, ardhi hukuwa na uzalishaji uliopungua. Hili pia linajulikana kama ‘kuenea kwa jangwa’ na hugeuza mashamba na mahali pa kulisha wanyama kuwa ardhi isiyona uzalishaji iliyo hectare nyingi, zilizona uwezekano wa kupotezwa.

Uchafu wenge madhara.

Uchafu wenge sumu unaotoka kwa viwanda vinavyotumia kemikali na mionzi. Taka hii hudhuru mazingira yote kuititia majanga kama kiwanda cha chama cha kutengeneza dawa ya magugu kilipovuja kemikali huko Bhopal, India, kiwanda kililipuka.

Mvua ya acidi.

Imetajwa hapo juu chini ya uchafuzi wa hewa, mvua ya acidi huharibu misitu na maziwa hasa katika Europa na Amerika Mashariki. Uchafuzi unapoingia majini na kufanya mvua kuwa yenye acidi, miti, mimea, samaki na hata mijengo huathirika.

Kupungua kwa safu ya ozoni.

Baadhi ya kemikali kama chlorofluorocarbons (CFC's) hutumiwa katika vitu vinavyotumika katika majokofu na katika taratibu nyinginezo za viwandani lakini sasa zinaonekana kudhuru safu ya ozone. Safu ya ozone hulinda ardhii kutokana miale hatari ya jua inayoitwa ultra-violet rays (UV). Kemikali zinapoharibu safu ya ozone, kuongezeka kwa miale ya UV hufika ardhini na kudhuru afya ya binadamu huku ikileta kansa ya ngozi na magonjwa mengineyo.

Matatizo mijini.

Miji mingi hukabiliwa na shida za taka, uchafuzi wa hewa, kelele, msongamano na kupungua kwa maeneo yakuishi.

Kupungua kwa rasilimali.

Ongezeko la mahitaji ya nishati na rasilimali katika dunia nzima linasababisha rasilimali ya kiasilia kama mafuta, makaa ya mawe, madini na misitu kuisha. Jambo hili linaongeza ushindani wa rasilimali jambo ambali linaleta migogoro ya kimataifa. Kutafuta rasilimalizaidi ili kutimiza mahitaji kutakuwa shida kubwa hivi karibuni isipokuwa vyanzo vya nishati badala vvitumike kama maji, upepo au nishati ya nyuklia badala ya rasilimali inayopimika kama mafuta, makaa ya mawe au gesi ya kiasilia.

Wakufunzi, uliza wanacluster maswali haya:

Je, nchi ya Kenya hufikiwa na athari za baadhi ya shida hizi?

Je, Kenya huchangia au kusababisha yoyote ya shida hizi?

Jinsi Kenya inavyokua, unafikiria ni shida zipi za kidunia zitakuwa mbaya zaidi?

Hamasisha cluster yako ya TIST na wanajamii wnege kupanda miti zaidi ili kupunguza baadhi ya athari hizi mbaya kwa hali ya anga ili mazingira yetu yaye bora zaidi!

Kutengeneza mbolea kutokana na mimea – mbolea ya kiasili.

Mboleo ya majani ni mbolea ya kiasilia ya kusaidia mimea yako kukua. Ni bora zaidi ya mbolea za viwanda kwani ni ya kiasili na haina athari za kuumiza mimea na mazingira. Kuna njia nyingi za kutengeneza mbolea, lakini njia ifuatayo imekuwa saidifu katika baadhi ya maeneo. Uliza majirani zako katika cluster yako ni gani imewaonekania.

Preparation of compost:

- 1) Chagua eneo lenye upana wa mita nne na urefu wa mita nne la kuchimba shimo lako la taka
- 2) Fagia sehemu hiyo
- 3) Chimba shimo la mduara lenye upana wa mita tatu au nne na mita moja na nusu kina.
- 4) Kusanya masala yote ya mimea uliyo nayo na uyakate kuwa sehemu ndogo ndogo (kwa mfano majani na mashina ya mahindi, mtama, maharagwe)
- 5) Weka masala haya ya mimea katika shimo ilo hadi kina cha nusu mita.
- 6) Halafu ongeza lita tano za jivu
- 7) Halafu uongeze centimita thelathini (ama kiwango kilichopo) za kinyesi cha mifugo (kwa mfano kinyesi cha nguruwe, ng'ombe, mbuzi au kuku).
- 8) Ongeza safu nyingine ya majani ya mimea na mashina (nusu mita)
- 9) Ongeza lita zingine tano za jivu.
- 10) Ongeza majani na mashina tena hadi shimo likaribie kujaa.
- 11) Hatimaye, ongeza safu ya udongo hadi shimo lijae.
- 12) Unapokuwa ukiweka udongo shimonii, ingiza fimbo ndefu katikati mwa shimo hadi ifike chini ya shimo.
- 13) Liache shimo la taka kwa miezi mitatu (siku tisini).
- 14) Katika kipindi hiki tumia maji yako machafu kuweka katika shimo hili. Kwa mfano, baada ya kuosha nguo au nyumba, yamwage maji uliyotumia juu ya shimo. Ikiwa una mifugo waweza pia kumwaga mikojo ya mifugo juu ya shimo.
- 15) Jambo hili litaongeza naitrojeni kwa mboleo yako.
- 16) Jaribu kuweka maji kila siku kwa njia hii, ama wakati maji yapo.
- 17) Baada ya siku tisini mbolea itakuwa tayari.

Tumia fimbo kama kipima joto – mbolea inapokuwa tayari lazima iwe na joto na waweza kuona mvuke ukitoka kwa fimbo hiyo baada ya kuitoa.

Matumizi ya mbolea hii:

Ukishachimba mashimo yako ya kupanda mahindi, mtama au mimea mingine, ongeza mboleo kiwango kinachotoshea katika kiganja chako katika kila shimo. Angalia ili kujua matokeo!
